

MAHARSHI CHAUDHARY

mmchaudhary37@gmail.com | Sydney, Australia | [linkedin.com/in/mm37](https://www.linkedin.com/in/mm37) | github.com/mhchy2020 | <https://mhchy2020.github.io/portfolio/>

PROFESSIONAL SUMMARY

AI Engineer and Full-Stack Developer focused on building intelligent, scalable systems that bridge machine learning and real-world applications. Experienced in developing mobile and backend solutions alongside deep learning models, including computer vision and semantic segmentation. Proficient in Python, TensorFlow, Keras, and modern web and mobile technologies, with a strong emphasis on clean architecture, performance, and user experience. A proactive problem solver who thrives in collaborative environments and continuously adapts to emerging technologies

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript, React.js, React Native, REST APIs, HTML/CSS, Expo, Jest

Backend: Node.js, Express.js, Next.js

Database: PostgreSQL, SQL, Prisma

Languages: Python, Java, C/C++, Bash, shell

Tools: Docker, VS Code, WSL, Git, JIRA, Confluence, Postman

PROFESSIONAL EXPERIENCE

CitiXP

August 2025 - May 2026

Software Developer

Sydney, NSW, Australia

- Developed and maintained a cross-platform mobile application using React Native and Expo, successfully deployed and tested on Android
- Implemented modern UI components and major UI/UX enhancements, improving design consistency, usability, and performance
- Built and maintained backend services using Next.js, including RESTful APIs, server-side logic, and database integration
- Designed and managed the database layer using Prisma ORM with Neon (PostgreSQL) for scalable and efficient data access
- Implemented authentication and user management using Clerk, ensuring secure login and session handling
- Used TypeScript across the frontend and backend to improve type safety, maintainability, and code quality
- Deployed backend services on Vercel, ensuring reliable production builds and environment configuration
- Managed source control and collaboration using GitHub, including feature branching, pull requests, and code reviews
- Collaborated in CI/CD workflows, debugging production issues and contributing to clean, scalable codebases
- Worked closely with designers and developers to bridge frontend and backend development in a full-stack environment

PROJECTS

Semantic Segmentation in Unstructured Environment

AI Engineer

- Created Deeplabv3 model from scratch using Python and Keras
- Trained model in RUDG dataset to segment 15 terrains in the images
- Achieved an overall accuracy of 85%

Web search engine

Python Developer

- Built a search engine for 1,000 documents using a JSON-formatted inverted index
- Integrated word preprocessing, NLTK-based lemmatization, and spell correction
- Ensured query response time under 10 seconds

CeleSte - Conference Management System

Frontend Developer

- Developed a conference management application to assist attendees with event logistics
- The app includes features like ticket purchasing, session booking with waitlisting, direct messaging, and a discussion forum
- Built using React native with Expo CLI

Instance Segmentation of sea turtle

AI Engineer

- Collaborated with the team to create three neural network models: U-Net, DeeplabV3, and PSPNet
- Trained these models on dataset SeaTurtleID2022 to classify 3 instances of the turtle's body

EDUCATION

University of New South Wales

May 2023 - May 2025

Master's, Information Technology

- Specialization in Artificial Intelligence
- Relevant Coursework: Artificial Intelligence, Machine Learning, Neural Networks, Computer Vision
